

ISO 22301

BUSINESS CONTINUITY MANAGEMENT SYSTEMS (BCMS)

CRISIS

ABOUT BCMS

ISO 22301 is an internationally recognized standard that provides a framework for organizations to establish, implement, maintain, and improve a Business Continuity Management System (BCMS). This standard guides organizations in identifying potential threats, assessing their impacts, and developing strategies to protect critical operations and minimize disruptions.

The core components of a BCMS include risk assessment, business impact analysis, continuity planning, training, and regular reviews to ensure effective response and recovery from disruptive incidents. By adopting ISO 22301, organizations can enhance their resilience, minimize downtime, protect their reputation, maintain stakeholder confidence, and ensure the continuity of essential functions during and after an unexpected event. This structured approach to business continuity helps organizations of all sizes and sectors stay prepared and maintain operations even in the face of significant challenges.

BENEFITS

- Helps organizations build resilience by identifying potential risks, developing strategies to mitigate those risks, and establishing protocols for responding to and recovering from disruptions
- Minimizes the impact of disruptions and improve risk management processes thereby reducing financial losses and preserving stakeholder and customer confidence
- Ensure compliance with applicable regulations, avoiding penalties and legal consequences
- Ensure systematic response to crises while increase organisational efficiency, effectiveness through continual process improvements
- Enhances corporate image and branding and improve access to global markets

**SUSTAINABLE
